

## **ABSTRACT**

*Inv. A'* According to one embodiment of the invention an apparatus is provided. The apparatus comprises a positioning mechanism to determine a position of said apparatus; a baseband module comprising a plurality of network interfaces each supporting a network communications protocol; a determining mechanism to determine which communications network are operative at said position; a selection mechanism to select one of said operative communications network; and a connection mechanism to seamlessly connect said apparatus to said selected communications network using one of said network interfaces.
